TransSuite

Video Control System

The TransSuite® Video Control System (VCS) is TransCore's industry-leading CCTV control system.

TransSuite VCS is designed to meet a wide range of CCTV system needs supporting both digital and analog video. In addition, TransSuite VCS can be configured to support DVRs, TV tuners, compound switches, etc., if required.

The TransSuite VCS is scalable from a standalone CCTV system of 5 or more cameras to systems of over 100 cameras with available fully integrated ITS support for traffic control, dynamic message sign (DMS) control, incident management, and freeway traffic management. TransSuite VCS is a client-server system operating on a PC-based hardware architecture using a Windows® graphical user interface.

VCS Control Features

TransSuite VCS is a feature-rich CCTV management system.

Features include the following:

▶ Support for multiple CCTV types

▶ Fully compliant NTCIP communications

▶ Real-time communications and error checking

▶ IP communications support including wireless

▶ Flexible, full featured camera tour configuration

The TransSuite Family

TransSuite VCS is part of our family of transportation management software products. TransSuite's user interface is consistent and intuitive across the entire product family. The Windows-based interface will be familiar even to novice users because the interface employs Windows standards for drag and drop, ToolTip information, and context-sensitive device menus. Each workstation can access

TRANSCORE®

Trusted Transportation Solutions

all system functions with customized security levels for each user. TransSuite VCS offers an extremely flexible user interface that displays real-time video from CCTV cameras. The interface is also integrated with the control interfaces to facilitate system navigation and management.

Standards Based

TransSuite leads the industry in the implementation of ITS standards, including NTCIP communications. TransSuite is also fully integrated with industry standards for interface, network, database, and real-time controls. This emphasis on standards enables our customers to maximize compatibility with their existing workstation and server components.
